What is printed to the console by the following command?

```
1 echo Demetrius || [[ 6 -eq 7 ]] || echo Helena &&  
echo Hermia || [[ 7 -gt 4 ]]
```

☐

```
1 Demetrius  
2 Helena
```

☐

```
1 Helena  
2 Hermia
```

☐

Nothing is printed to the console.

☒

```
1 Demetrius  
2 Hermia
```

测验, 10 个问题

Consider the following program called numrange.sh:

```
1  #!/usr/bin/env bash
2  # File: numrange.sh
3
4  odd=$(echo "$1 % 2" | bc)
5
6  if [[ $odd -eq 0 ]]
7  then
8      status="even"
9  else
10     status="odd"
11 fi
12
13 if [[ $1 -gt 0 ]] && [[ $1 -lt 10 ]]
14 then
15     location="in"
16 else
17     location="out of"
18 fi
19
20 echo "This number is $status and $location
21     range."
```

Which of the following is the result of commands below?

```
1  bash numrange.sh 6
2  bash numrange.sh 11
3  bash numrange.sh 400 10
```

☐

```
1  This number is odd and out of range.
2  This number is even and in range.
3  This number is even and out of range.
```

☐

```
1  This number is even and out of range.
2  This number is odd and in range.
3  This number is even and out of range.
```

☐

```
1  This number is even and in range.
2  This number is odd and out of range.
3  - error - too many arguments
```

☒

```
1  This number is even and in range.
2  This number is odd and out of range.
3  This number is even and out of range.
```

point

6.

Consider the following program called reqseq.sh:

```
1 #!/usr/bin/env bash
2 # File: repseq.sh
3
4 sequence=$(eval echo ${1..$2})
5
6 for i in $sequence
7 do
8   compute=$(echo "$i % 3" | bc)
9   result="$result $compute"
10 done
11
12 echo $result
13
```

Which of the commands below would create the following output?

```
1 1 2 0 1 2 0 1 2 0
```

- ☒ 1 bash repseq.sh 1 9 3

- ☐ 1 bash repseq.sh 1 6 2

7.

What's the purpose of the **local** keyword?

- ☐ The **local** keyword ensures that all of the actions taken by a particular function do not affect the global computing environment.
- ☐ The **local** keyword stores the value of several variables locally so that they can be accessed later on within a script.
- ☒ The **local** keyword allows you to assign the value of a variable within a function without changing the global value of that variable.
- ☐ The **local** keyword allows you to create a function such that the function can be used within your shell the same way you would use a command.

9.

What actions are taken by the following commands?

```
1  chmod a+x my_program
2  chmod go-rw my_program
```

- ☐ 1. Allows anyone to execute **my\_program**.
- ☐ 2. Prevents the owner from reading or modifying **my\_program**.
- ☐ 1. Allows only the owner to execute **my\_program**.
- ☐ 2. Prevents the owner from reading or modifying my\_program.
- ☐ 1. Allows only the owner to execute **my\_program**.
- ☐ 2. Prevents anyone other than the owner from reading or modifying **my\_program**.
- ☒ 1. Allows anyone to execute **my\_program**.
- ☐ 2. Prevents anyone other than the owner from reading or modifying **my\_program**.

1 point

10.

What is one reason you might want to modify the **PATH** environmental variable?

- ☐ The PATH can be modified in the bash profile which is where aliases are defined. The bash profile is run every time you start a shell.
- ☐ You can make functions available to you on the command line by including the PATH variable inside of the definition of a function.
- ☐ Modifying the PATH makes it easier to switch between programs when you are using multiple shells at once.
- ☒ You can add a directory containing your own programs to the PATH which allows you to access them on the command line.
