During hyperparameter search, whether you try to babysit one model ("Panda" strategy) or train a lot of models in parallel ("Caviar") is largely determined by:

Hyperparameter tuning, Batch Normalization, Programming Frameworks

测验, 10 个问题

The presence of local minima (and saddle points) in your neural network

10/10 分 (100%)

_	

The amount of computational power you can access

正确

The number of hyperparameters you have to tune

1/1分

4.

If you think β (hyperparameter for momentum) is between on 0.9 and 0.99, which of the following is the recommended way to sample a value for beta?

```
1 r = np.random.rand()
2 beta = r*0.09 + 0.9
```

```
1 r = np.random.rand()
2 beta = 1-10**(- r - 1)
```

正确

```
1 r = np.random.rand()
2 beta = 1-10**(- r + 1)
```

```
1 r = np.random.rand()
2 beta = r*0.9 + 0.09
```

5.

Finding good hyperparameter values is very time-consuming. So typically you should do it once at the start of the project, and try to find very good hyperparameters so that you don't ever have to revisit tuning them again. True or false?

False

正确

~	1/1分
	th normalization as presented in the videos, if you apply it on the \emph{l} th layer neural network, what are you normalizing?
\bigcirc	$b^[l]$
\bigcirc	$W^{[}l]$
	$z^[l]$
正确	
\bigcirc	$a^[l]$
~	1/1分
7。 In the	normalization formula $z_{norm}^{(i)}=rac{z^{(i)}-\mu}{\sqrt{\sigma^2+arepsilon}}$, why do we use epsilon?
正确	To avoid division by zero
\bigcirc	To have a more accurate normalization

To speed up convergence

In case μ is too small

Hyperparameter tuning, Batch Normalization, Programming Frameworks 测验, 10 个问题 Which of the following statements of

10/10 分 (100%)

10 个问题	Which of the following statements about γ and eta in Batch Norm are true?		
	β and γ are hyperparameters of the algorithm, which we tune via random sampling.		
	未选择的是正确的		
	There is one global value of $\gamma\in\Re$ and one global value of $\beta\in\Re$ for each layer, and applies to all the hidden units in that layer. 未选择的是正确的		
	The optimal values are $\gamma=\sqrt{\sigma^2+arepsilon}$, and $eta=\mu$.		
	未选择的是正确的		
	They can be learned using Adam, Gradient descent with momentum, or RMSprop, not just with gradient descent.		
	正确		
	正确		
	✔ 1/1分		
	9.		
	After training a neural network with Batch Norm, at test time, to evaluate the neural network on a new example you should:		
	Use the most recent mini-batch's value of μ and σ^2 to perform the needed normalizations.		
	Skip the step where you normalize using μ and σ^2 since a single test example cannot be normalized.

正确 If you implemented Batch Norm on mini-batches of (say) 256 examples, then to evaluate on one test example, duplicate that example 256 times so that you're working with a mini-batch the same size as during training. 1/1分 10. Which of these statements about deep learning programming frameworks are true? (Check all that apply) A programming framework allows you to code up deep learning algorithms with typically fewer lines of code than a lower-level language such as Python. 正确 Deep learning programming frameworks require cloud-based machines to run. 未选择的是正确的 Even if a project is currently open source, good governance of the project helps ensure that the it remains open even in the long term, rather than become closed or modified to benefit only one company.
